

Assignment –4
Retrieving Information from Tables.

- 1) Write a select command that produces the order number, amount, and date for all rows in the Orders table.

```
SELECT order_num, amount, order_date FROM Orders;
```

- 2) Write a query that produces all rows from the Customers table for which the salesperson's number is 1001.

```
SELECT * FROM Customers WHERE Salesperson_Number = 1001;
```

- 3) Write a query that displays the Salespeople table with the columns in the following order: city, sname, snum, comm.

```
SELECT city, sname, snum, comm FROM Salespeople;
```

- 4) Write a select command that produces the rating followed by the name of each customer in San Jose.

```
SELECT rating, name FROM Customers WHERE city = 'San Jose';
```

- 5) Write a query that will produce the snum values of all salespeople (suppress the duplicates) with orders in the Orders table.

```
SELECT DISTINCT salesperson_num FROM Orders;
```
